# ADA SIGNAGE TECHNOLOGIES

There are many ways to produce ADA Compliant Signs. BELLCO manufactures and wholesales the following options to our clients to meet your project's required specifications:

## PHOTOPOLYMER

Photopolymer is a high-end sign material choice. The process utilizes polymer resin on a PETG base. Fabricated by exposing UV light through a film negative to a photopolymer sheet and water etched, these signs are specified widely in the sign industry. Available in stock thicknesses from .020 - .375", our .040 and .060 faces are ideal for curved frame systems.

- *Top choice for raised fine detail graphics & flexible lenses. Also available with natural aluminum base, 3form or custom laminate base.*
- *Interior Photoluminescent (glow in the dark) material available.*
- *Some photopolymer materials qualify for LEED Certification.*
- *More vandal resistant than applique/raster.*
- *Surface or Subsurface Painted.*
- *Can be ordered in any color combinations (see pages 9 & 10).*

## THERMO-COMPRESSSION, SOLID ACRYLIC DURABELL®

One of the newest industry processes, Thermo-compression signs are made with acrylic that is formed with heat and pressure, to produce a solid, single piece acrylic ADA sign face. Suitable for non-climate controlled areas and exterior conditions, these signs can be subsurface or surface painted. Thermo-Compression also allows for embedded graphics which encase images between layers of acrylic with a bond that cannot delaminate or be pulled apart.

- *Top choice for exterior and harsh environments.*
- *Perfectly Rounded Braille.*
- *Optional embedded graphic and exterior embedded photoluminescent (glow in the dark) signs.*
- *Some materials quality for LEED Certification.*
- *Surface or Subsurface Painted.*
- *Can be ordered in any color combinations.*

## DIRECT PRINT ADA TECHNOLOGY

This process allows you to print directly onto a wide variety of base materials. The UV LED print technology lays down 1/32" raised text and graphics and Grade II Braille directly onto the sign face.

- *Fast Process*
- *Top choice for multi-color background images or multi-color raised logo signs.*
- *Can be ordered in any custom color combinations.*
- *Can be used on certain Chemetals, Wilsonart or Formica materials as well as Aluminum and Brass.*

## APPLIQUE & BEAD RASTER BRAILLE

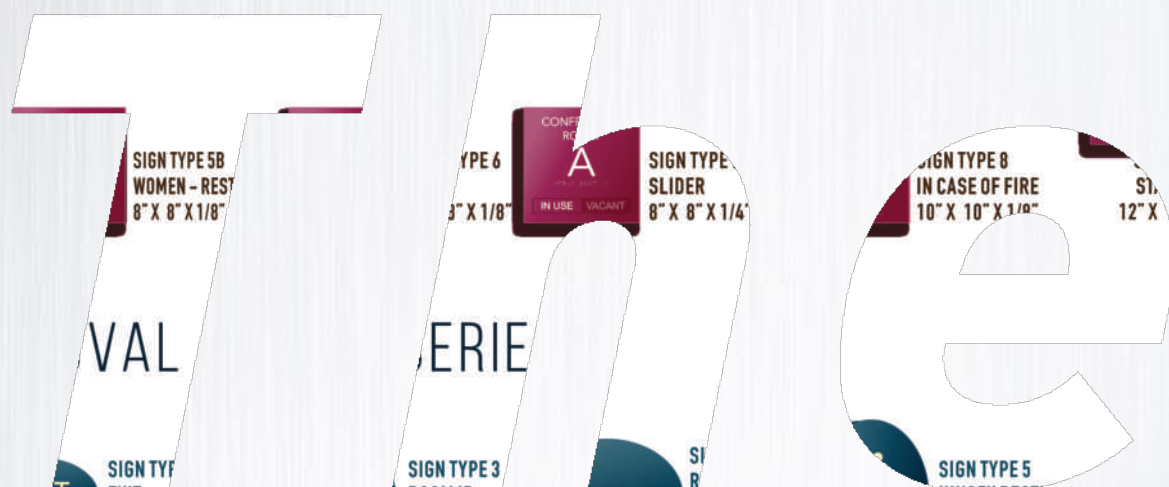

Signs are made using 1/32" thick plastic applique stock to cut out individual lettering and symbols. Lettering is then adhered to the sign face. Holes are drilled and individual raster beads are placed into those holes for the grade II braille translation section. Applique letters & braille can be placed onto engraving stock base choices, painted acrylic, brass, aluminum and other substrates.

- *Top choice for ADA on real brass.*
- *Applique letters & braille beads can be placed onto Chemetal, Wilsonart or Formica materials.*
- *Standard Color selection from Engraving Stock materials choices.*

# The Classics

Easy to order and affordable sign design options that offer a variety of simple, time-honored styles for your client to choose from. Our Classic Sign Series meet ADA Compliance and still allow your customer to select a design or

# The Premiums

Building on the Classic Designs, we have added oversize painted acrylic backers. These backers add an additional layer and

high-end look to your signs, giving them a "framed" appearance, without the cost of custom frames. The 1/8" thick backers can be centered or offset and sign background colors and text colors can be selected from page 9 and 10.

# ADA INSTALLATION GUIDELINES

The desired mounting location for ADA Compliant Signage is on the wall adjacent to the latch side of the door, followed by the nearest adjacent wall.

## MOUNTING LOCATION

In the case of outward swinging doors, the sign must be mounted to the wall outside of the arc of the door swing. The sign should be located within an 18" x 18" square of clear floor space (18" away from the door and 18" away from the wall).

Single door: Sign shall be mounted next to door on the latch side.

Double doors (two active leaves): Sign shall be located to the right of right handed door.

Double doors (one active leaf): Sign shall be located on inactive leaf.

Inward swinging doors: Sign may be mounted on door if three criteria are met: 1) the door closes automatically, 2) the sign is mounted on the push side of the door, 3) the door does not have a hold-open device. Common examples of doors that meet these criteria are kitchen and restroom doors.

This information is based on guidelines which can be found at [www.ada.gov](http://www.ada.gov) in Chapter 7, Section 703. Adhere to your local building authority for local code & regulations updates.

\*Signs should be installed 48 inches minimum above the floor surface, measured from the baseline of the lowest tactile character and 60 inches maximum above the floor surface, measured from the baseline to the highest tactile character. Do not hang signs directly on the door.

The majority of room signs should be mounted per the above instructions. Below we address how to handle the exceptions to the rule:

Double doors which are both "active"  
Double doors with one "active" door  
Outward Swinging Doors

Mount the sign on the right side  
Mount the sign on the "inactive" door  
Open the door all the way and mount the sign on the side, just outside the door swing

A sign can **ONLY** be mounted onto a door if these conditions exist:

The door closes automatically  
There is no hold-open device  
Sign is mounted on the push side of the door

*Please note that there are also rules specific to each state.  
Please reach out to state and local inspectors with questions, before installing your ADA Signs.*

## MOUNTING OPTIONS

**VHB Tape** is supplied on the back of your signs, to be used along with silicone by your installer.

**Holes** can be drilled to your specification to match the mounting hardware you supply.

Additional hardware, such as stand-offs, can be quoted if required.
